FEDERICO DOMINGUEZ MOLINA

773 - 219 - 4422 | fd.molina@outlook.com | federicodm.github.io

EDUCATION

The University of Chicago Computer Science Dept. & Harris School of Public Policy — Chicago, IL
M.S. in Computational Analysis and Public Policy (MSCAPP) — June 2024

Instituto Tecnológico Autónomo de México — Mexico City
B.A. in Economics, Honors — June 2020

PROFESSIONAL EXPERIENCE

Energy & Environment Lab — Chicago, IL
Data Scientist — June 2024 – Present

- Architected a global alert system to raise air pollution awareness using natural language processing and graph analysis, reaching over 250,000 impressions in three months
- Implemented 10+ in-house Python algorithms to verify the compliance of 350,000 Public Water Systems across the US for different pollutants, reducing manual review time by 75%

University of Chicago — Chicago, IL
Data Science Research Assistant — February 2023 – June 2024

- Co-developed FastAPI web platform to play laboratory games and inform research on children's decision-making
- Created 10+ interactive visualizations and dashboards with Plotly to detect bias in 250+ policing research papers

Coding it Forward — Chicago, IL
Data Engineering Fellow — June 2023 – August 2023

- Automated data collection & cleaning for six websites with Python and reduced 10+ weekly hours of manual work
- Built a Python data platform allowing City of Long Beach's Climate Office to download data from 2010-2023, improving access and saving hundreds of work hours annually

deep_dive — Mexico City
Senior Data Scientist — October 2021 – October 2023

- Led automatic alert system project to help 20+ clients improve customers relationships via social media analytics
- Created serverless computing architecture to collect data of over 250,000 commercial goods for strategic pricing
- Developed machine learning recommender system to offer customized loans to over 500,000 borrowers

Junior Data Scientist — June 2020 – October 2021

- Extracted and parsed data from key Mexican governmental sources to support decision-making for 10+ clients
- Implemented dynamic Power BI dashboard to monitor government projects and avoid 50+ potential challenges
- Devised supervised machine learning models to become a top inflation forecaster in Mexico

SELECT PROJECTS

Trading Platform Maintenance — November 2022 – September 2024

- Designed robust EC2 architecture and Python code to auto-trade over 10+ portfolios through Interactive Brokers, reducing trading errors by 95% and increasing profits
- Optimized AWS Cloud architecture by removing unused instances and stale data, reducing monthly costs by 35%
- Parallelized existing Python pipelines to extract price data for over 1,500 stocks, reducing runtime by 97% from two hours to under three minutes

SKILLS

Technical: **Python** (transformers, pytorch, scikitlearn, xgboost, boto3, pyspark, sqlalchemy, streamlit, seaborn, matplotlib, plotly, fastapi, flask, pandas, numpy), **R**, **SQL, C, SAS, MATLAB, Power BI**
Cloud Computing: **AWS** (Lambda, EC2, Neptune, Route53, SQS, SNS, Glacier), **Google Cloud, Databricks**
Publications: *Academic Copaganda (w/ Dr. Robert Vargas)*
